## **Tips For Healthy Air Conditioner Maintenance Clean And Replace The Filters**

Maintenance of Ac chores is a must job regularly and by replacing your air conditioner air filter or cleaning it every month during high seasons like summer, winter and once during the fall and spring is a nice option.

# Inspection Of Wiring And Ac Components

- Always remember start by turning off the power of the unit before working on an air conditioner.
- Remove the access panel of your unit and spot any signs of overheating or melted insulation on wires.
- You can check the capacitors in the Ac unit if you own an electrical test meter
- Replace it if you see excessive pitting on the contact switch.
- Always call an **air conditioning repair** expert to do the work for you if you see any of the above problems and do not feel comfortable replacing the parts yourself,

# Examine The Thermostat

Make sure your thermostat must work properly and by keeping your home at the right temperature can make you stay cool and calm.

# Inspection Of The Ac Fans And Fins

Always remember to turn the power off to your air conditioner unit before checking the fan, to make sure it's still in good condition.
